Piled Foundations & Underpinning

## **CODAP – Cohesion Displacement Auger Pile**

Bored displacement pile. CODAP is a form of bored pile. It is installed using high torque piling rigs combined with specially designed auger equipment. As the pile is installed during drilling, the soil is displaced laterally. Concrete is then placed whilst extracting the tooling, resulting in a bored pile with virtually no spoil.

CODAP is an economical alternative to traditional bored piling.

A “static design” is used, based on enhanced parameters.

CODAP is a bored pile, with driven qualities.
